

Install the IntelliJ IDEA and Run Java

For Windows OS, Mac book, and Linux users

Download website shown below. *Alternative:* check YouTube for more info.

<https://www.jetbrains.com/idea/download/#section=windows>

The screenshot shows a web browser window displaying the IntelliJ IDEA download page. The browser's address bar shows the URL `jetbrains.com/idea/download/#section=windows`. The page features the JetBrains logo and navigation links for Tools, Languages, Solutions, Support, Company, and Store. The main heading is "IntelliJ IDEA" with a "Download" button. Below this, there are tabs for "Windows", "Mac", and "Linux", with "Windows" selected. Two product editions are presented: "Ultimate" (described as "For web and enterprise development") and "Community" (described as "For JVM and Android development"). Each edition has a "Download" button and a ".exe" dropdown menu. The "Ultimate" download button is blue and labeled "Free trial", while the "Community" button is dark grey and labeled "Free, open-source". On the left side, the IntelliJ IDEA logo is shown along with version information: "Version: 2019.3.2", "Build: 193.6015.39", and "20 January 2020". There are also links for "Release notes" and "System requirements". At the bottom of the browser window, a taskbar shows a file named "idealC-2019.3.2 (1).exe" and a "Show all" button.

[Next: Featured plugins](#)

Congratulations for completing the installation!

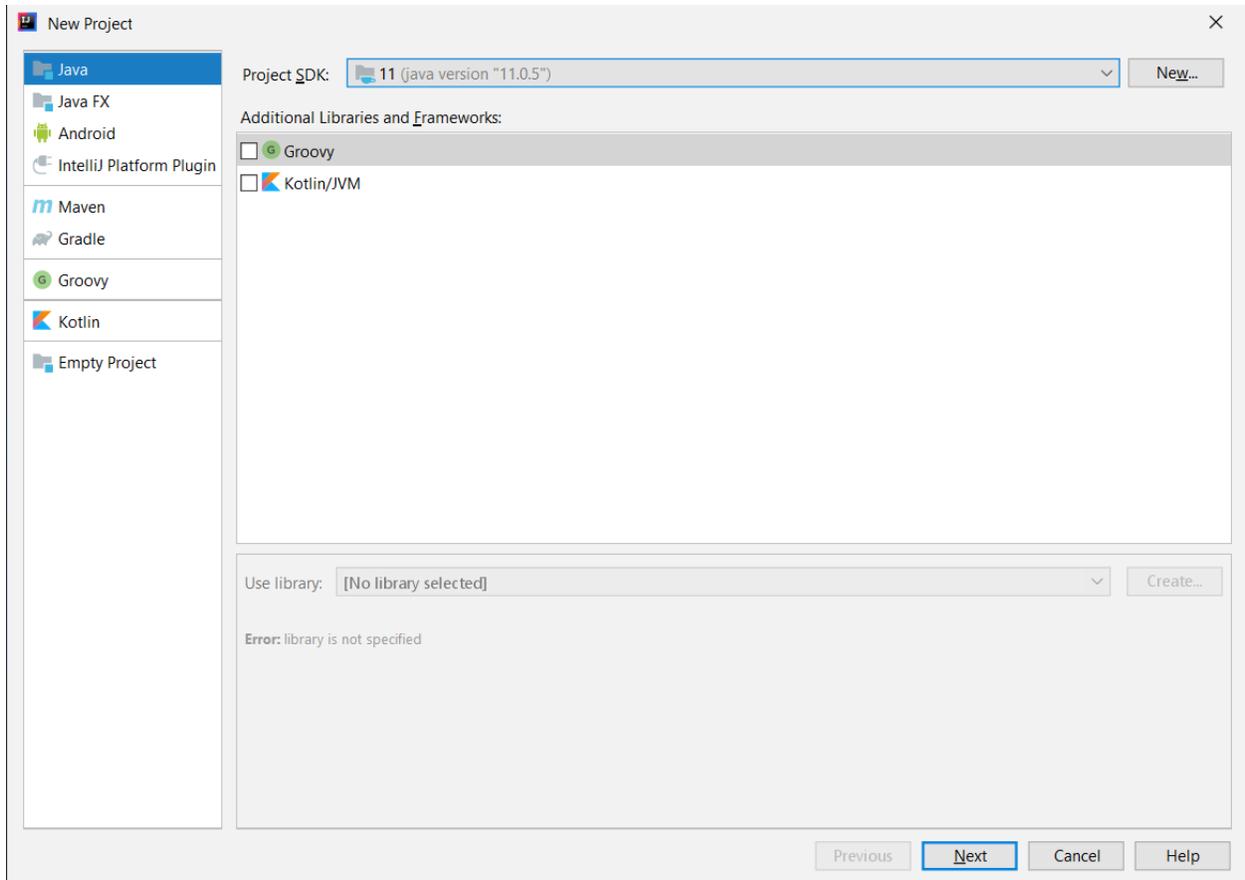

Next steps show how to run Java on IntelliJ IDEA.

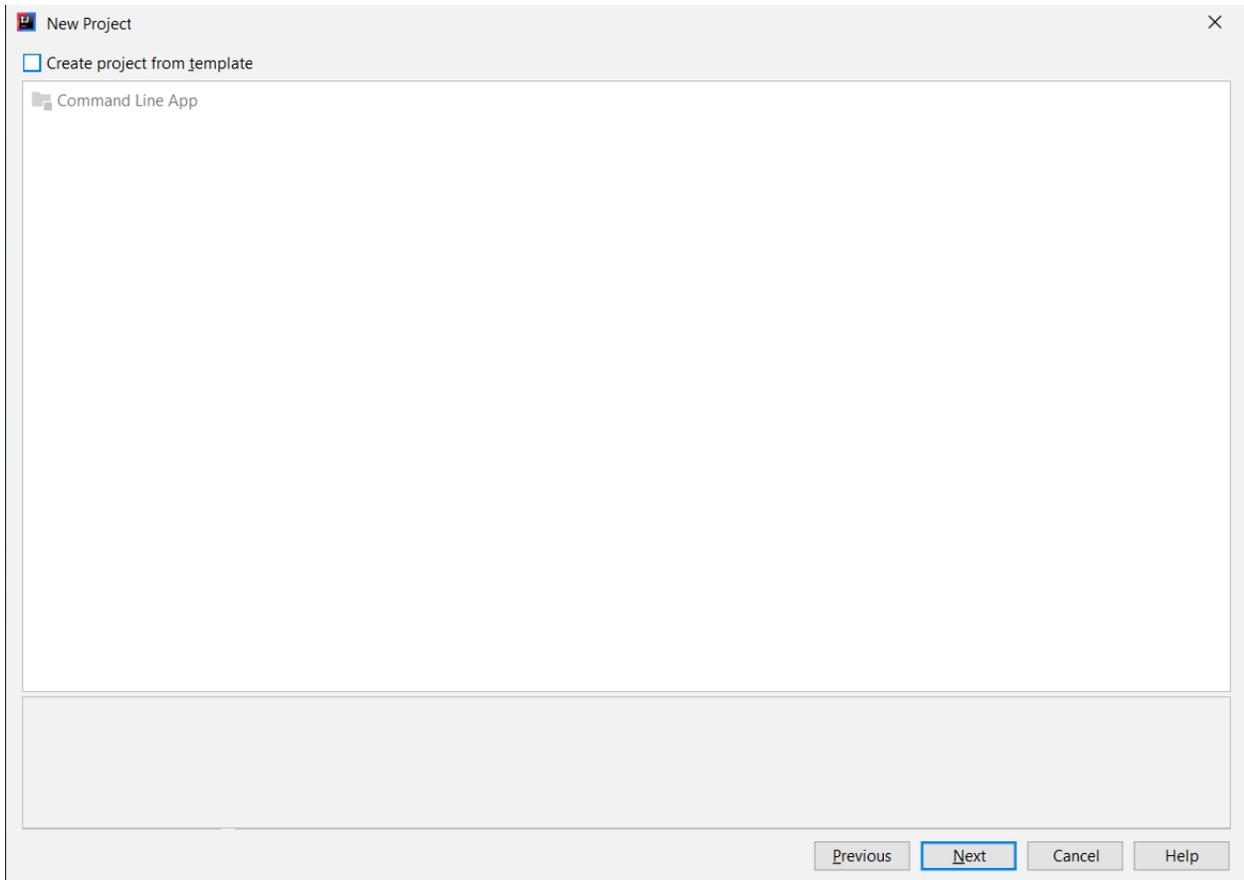

Click "Create New Project"

Note:

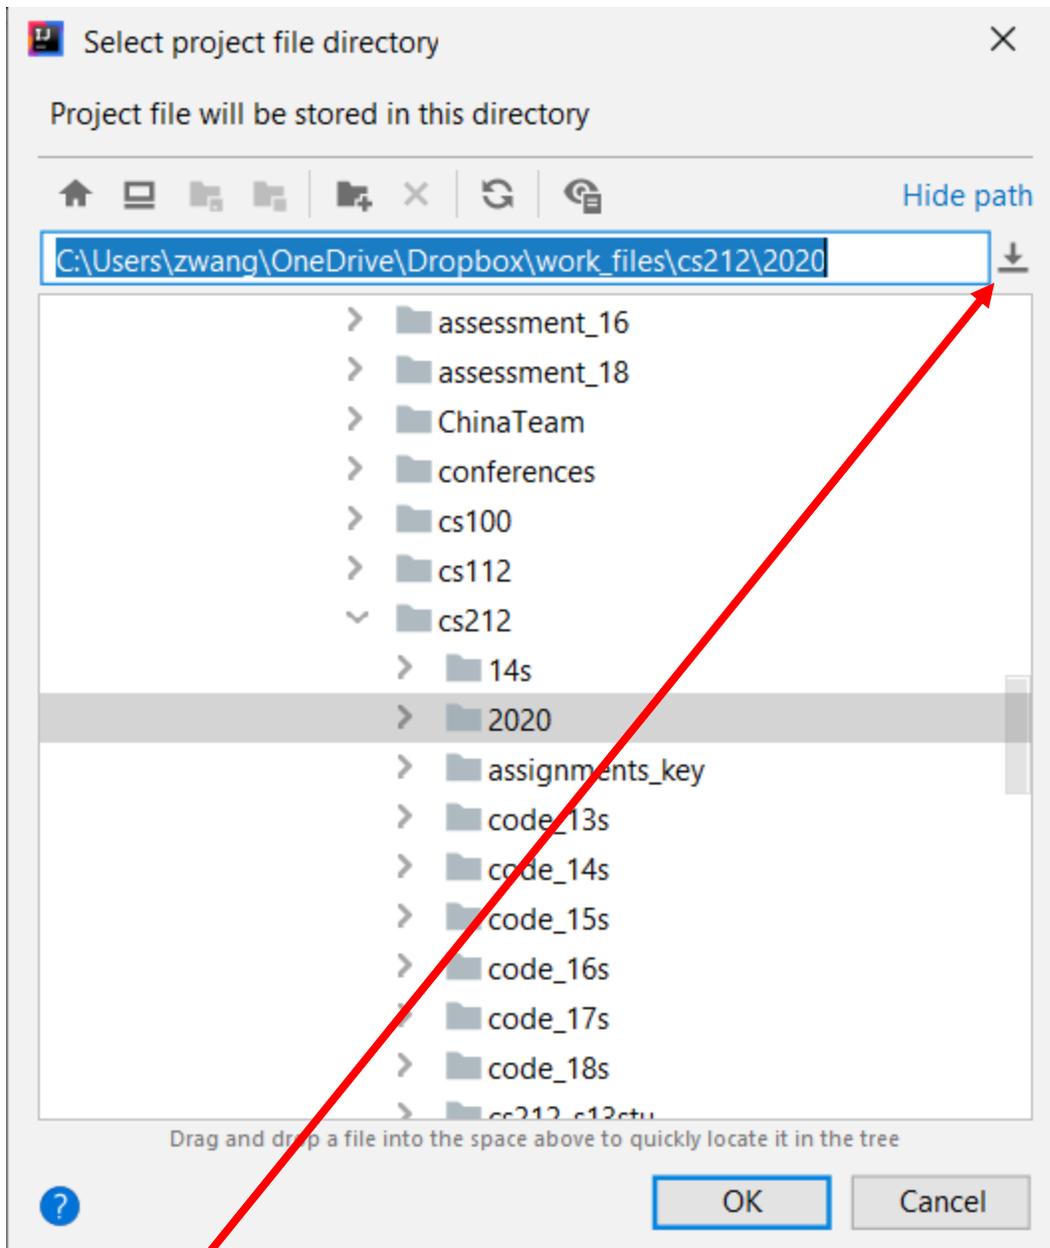

1. ALL Java programs in the project should be able to compile.
2. IF a program has problems to compile, it should be removed from the project, so keep ALL codes right.
3. IF you want to test a program, create a new project to edit and compile/run it

Click "Next"

Click "Next"

Choose the folder that would hold the project.

New Project

Project name: TestProject

Project location: C:\Users\zwang\OneDrive\Dropbox\work_files\cs212\2020\TestProject

More Settings

Module name: TestProject

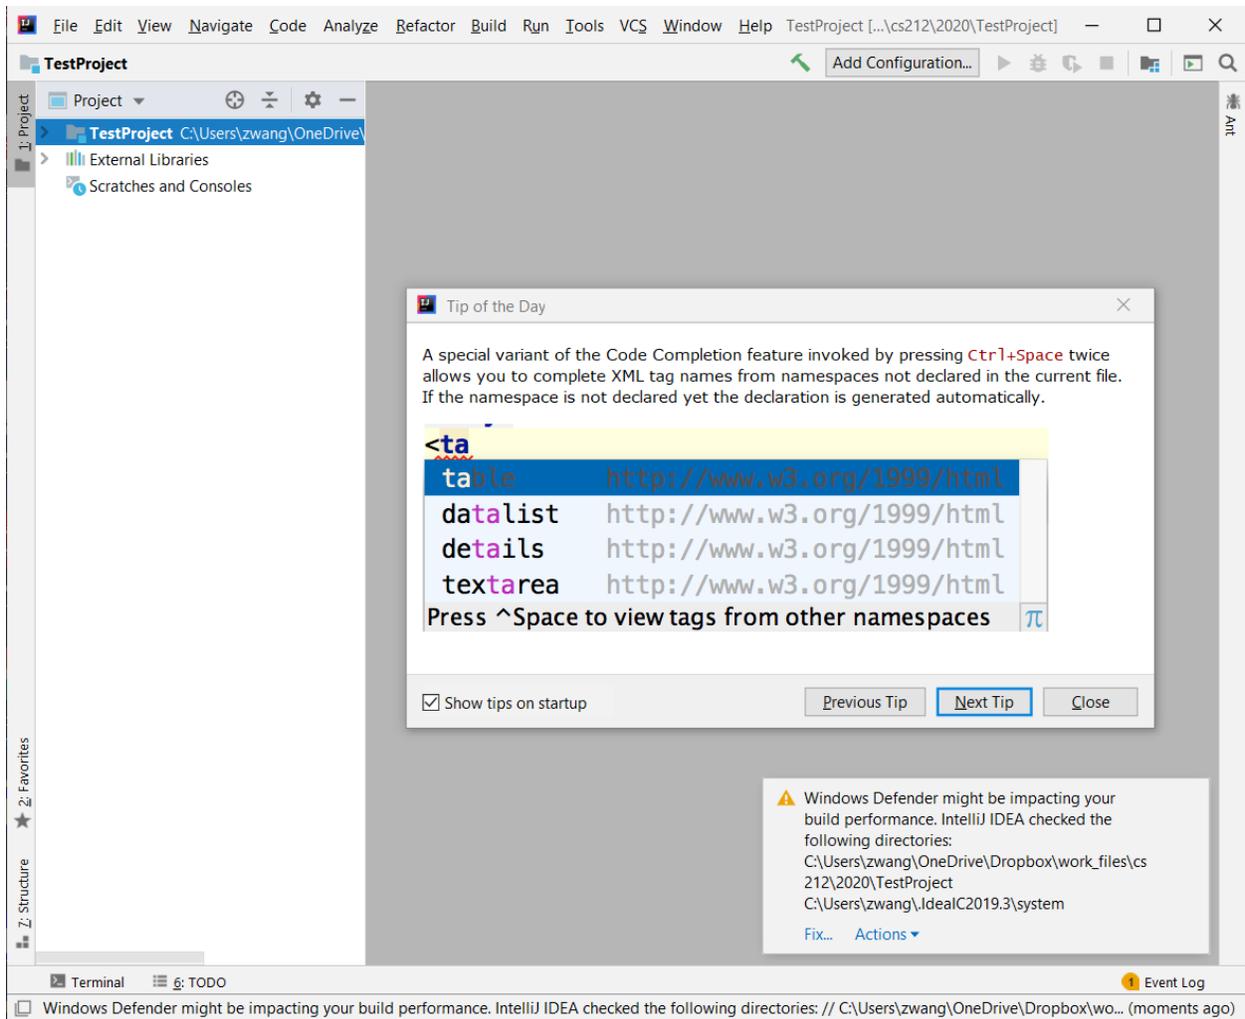

Content root: C:\Users\zwang\OneDrive\Dropbox\work_files\cs212\2020\TestProject

Module file location: C:\Users\zwang\OneDrive\Dropbox\work_files\cs212\2020\TestProject

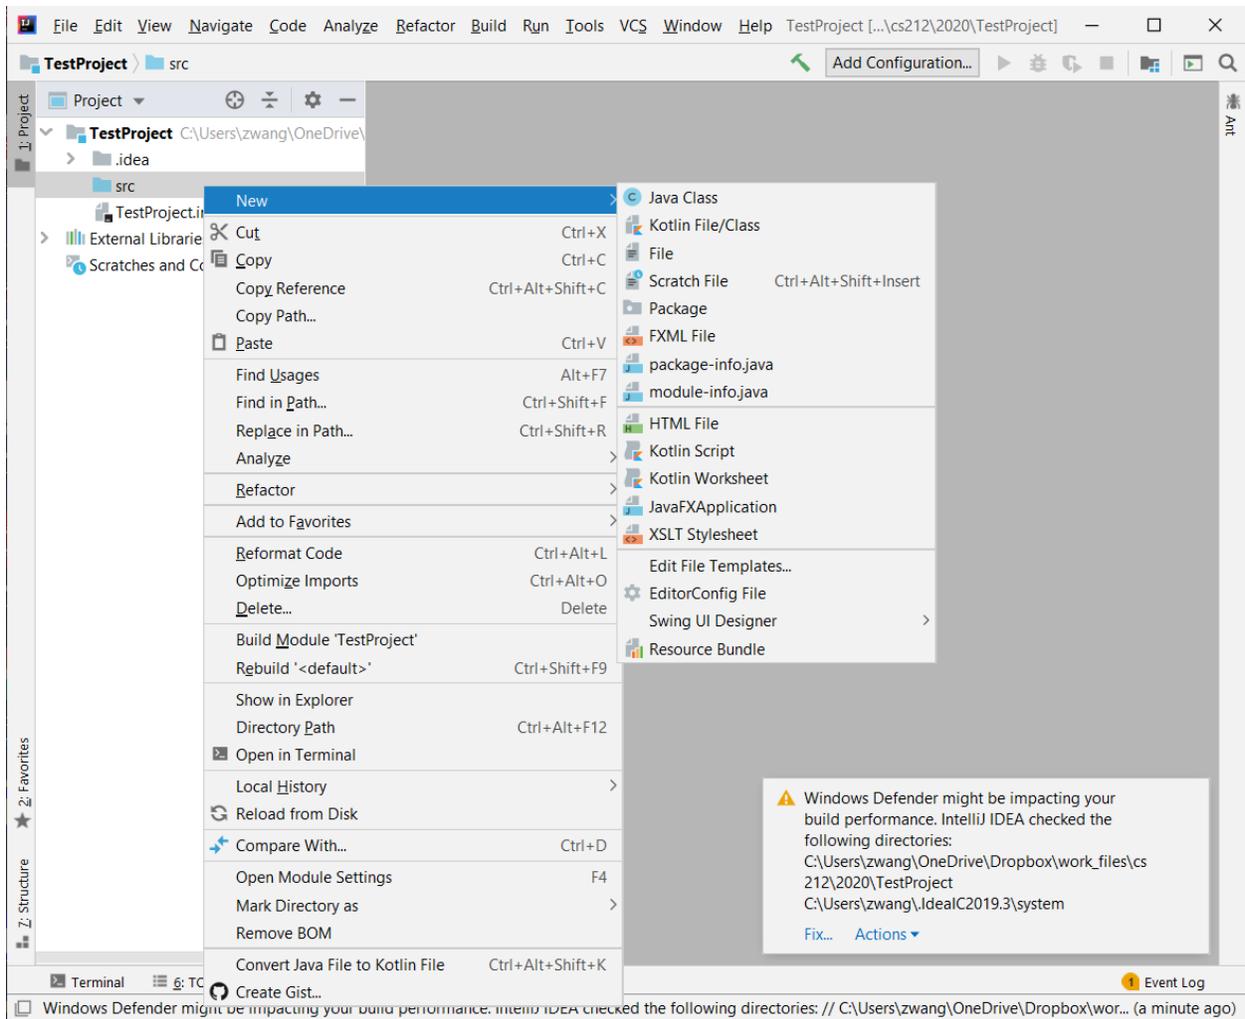

Project format: .idea (directory based)

Previous Finish Cancel Help

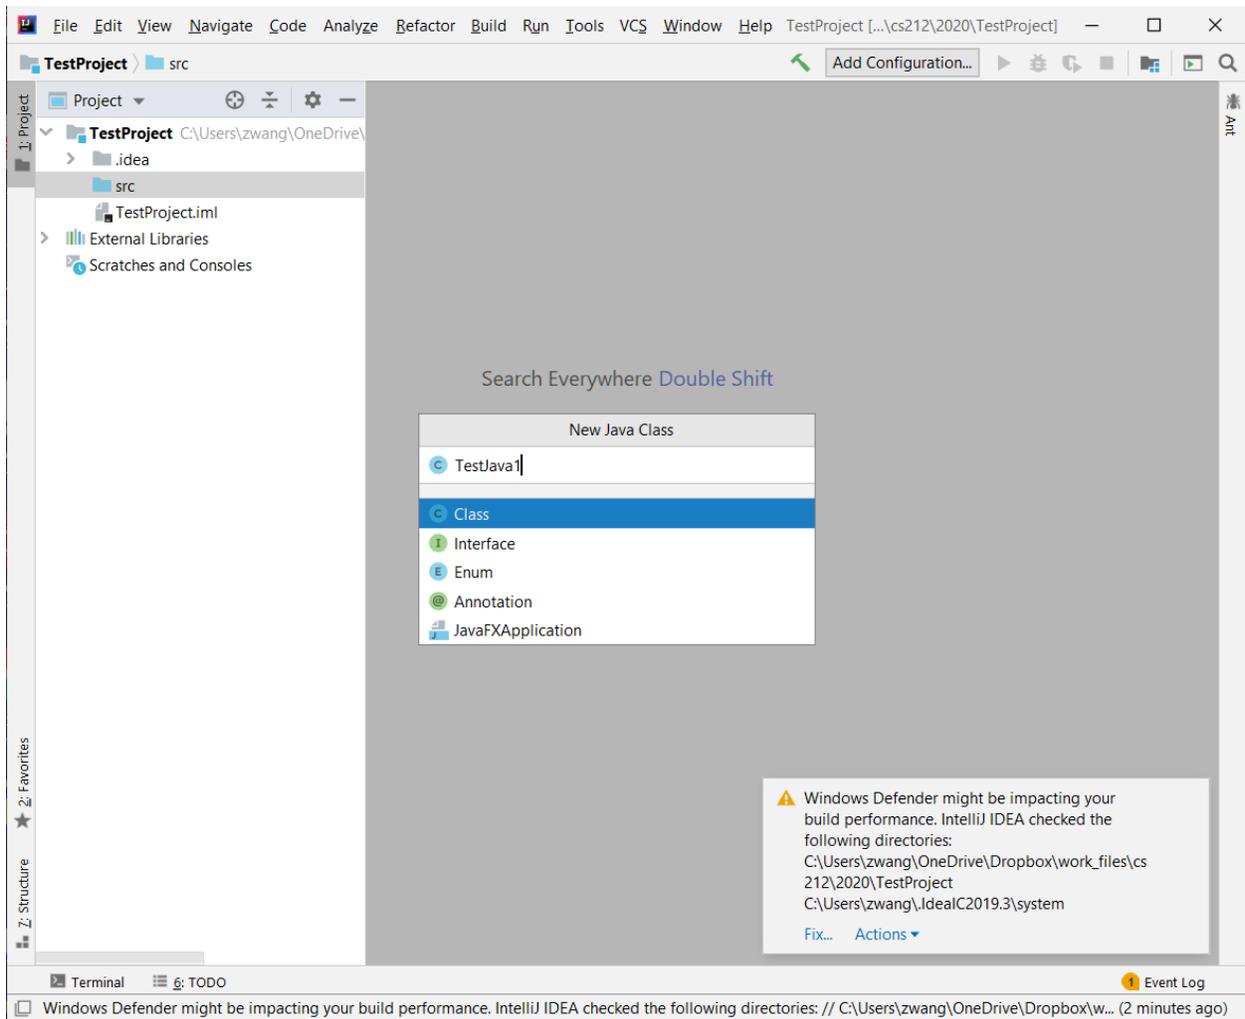

Type the project name, “TestProject”, following the folder name, and then it will be automatically filled in the upper textbox

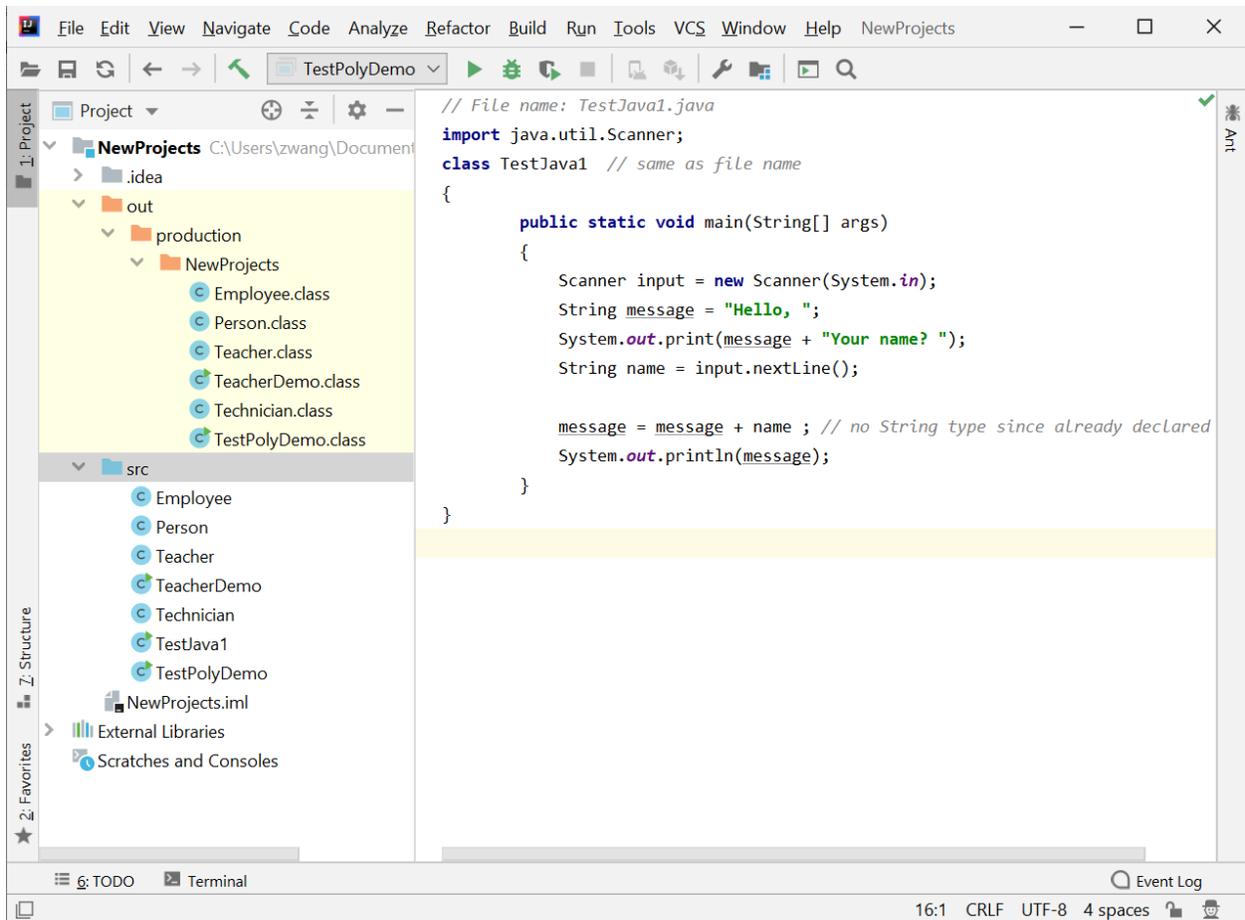

double-click the "TestProject" folder

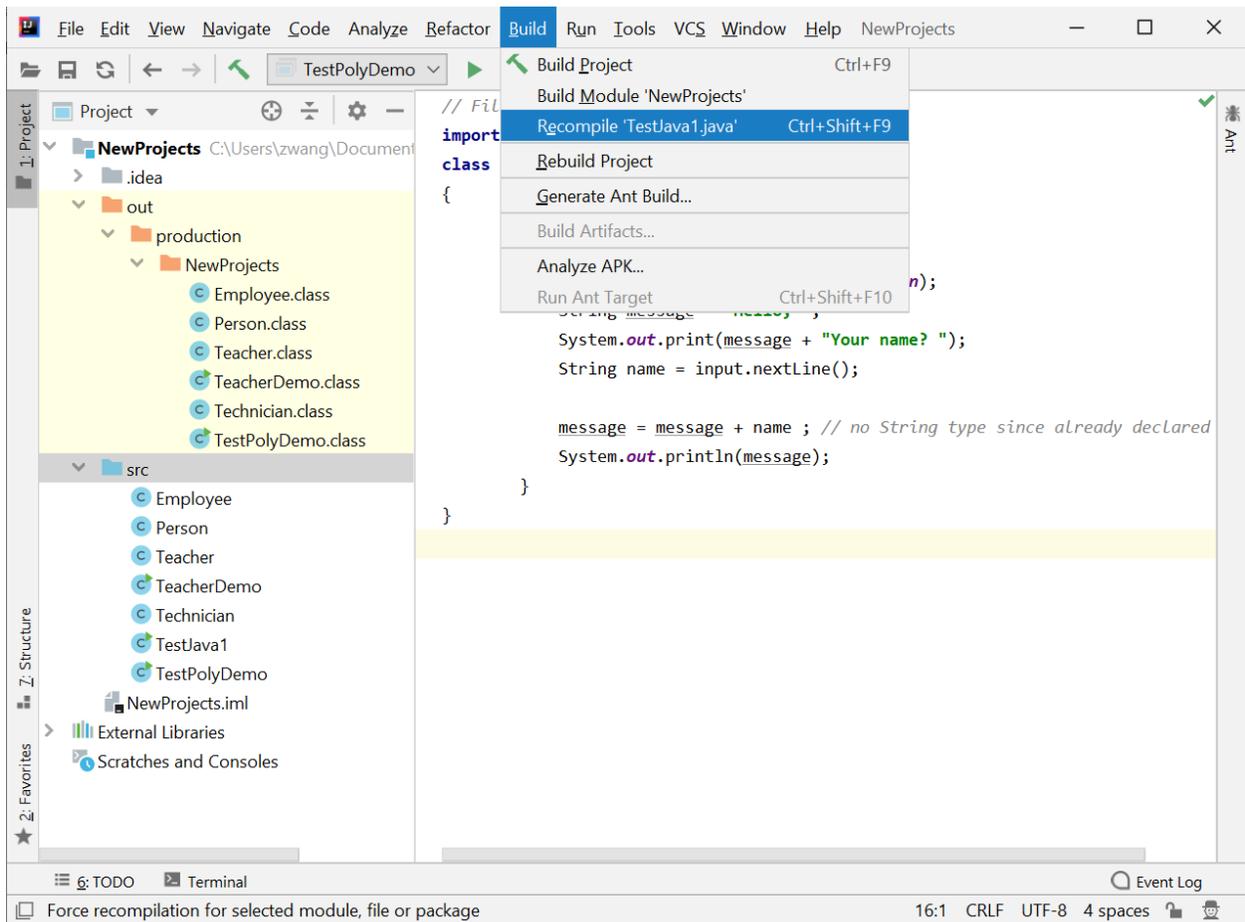

Right-click the src under “TestProject” → New → Java Class

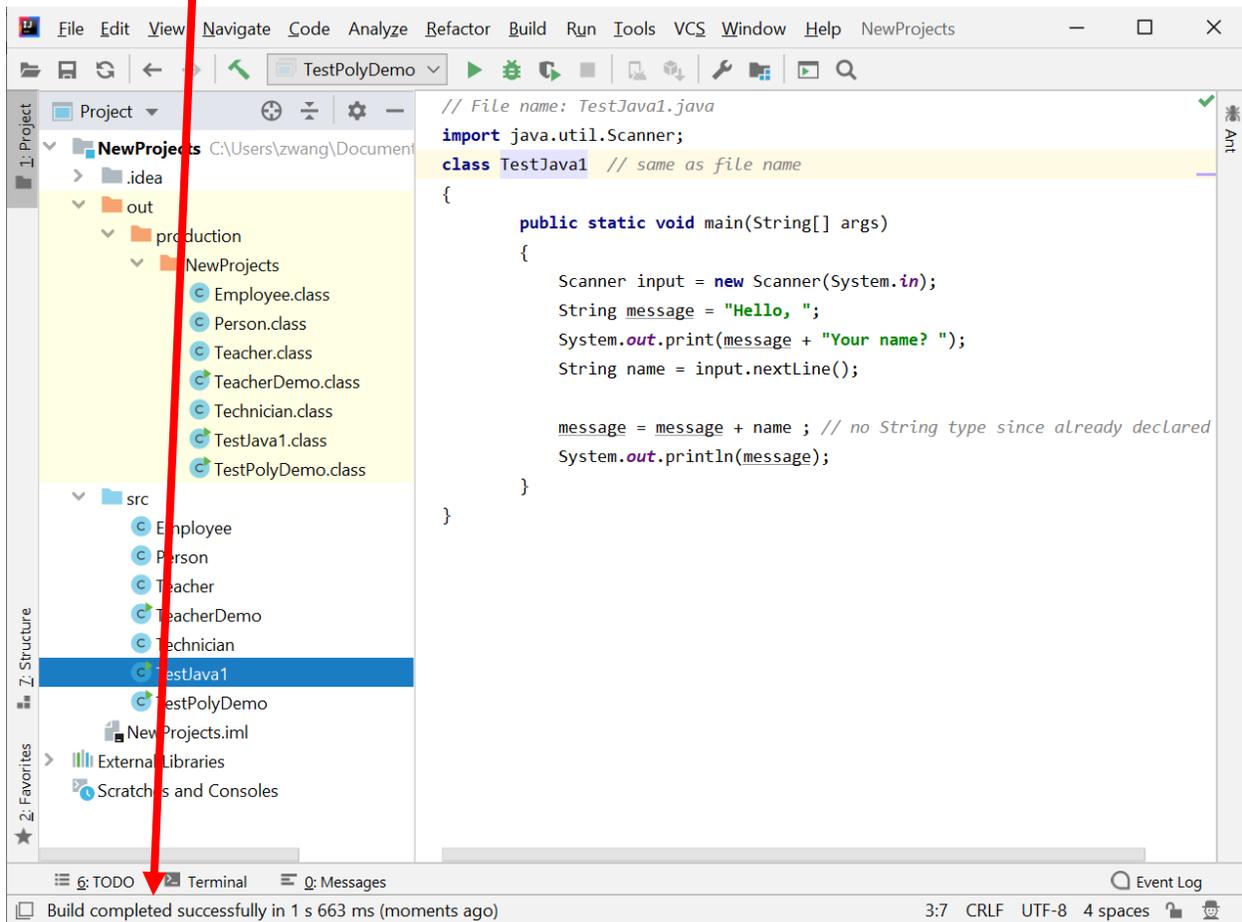

Type the class name in “New Java Class” window shown above; then insert your source code of the program shown below

Click Build → Recompile “TestJava1.java”

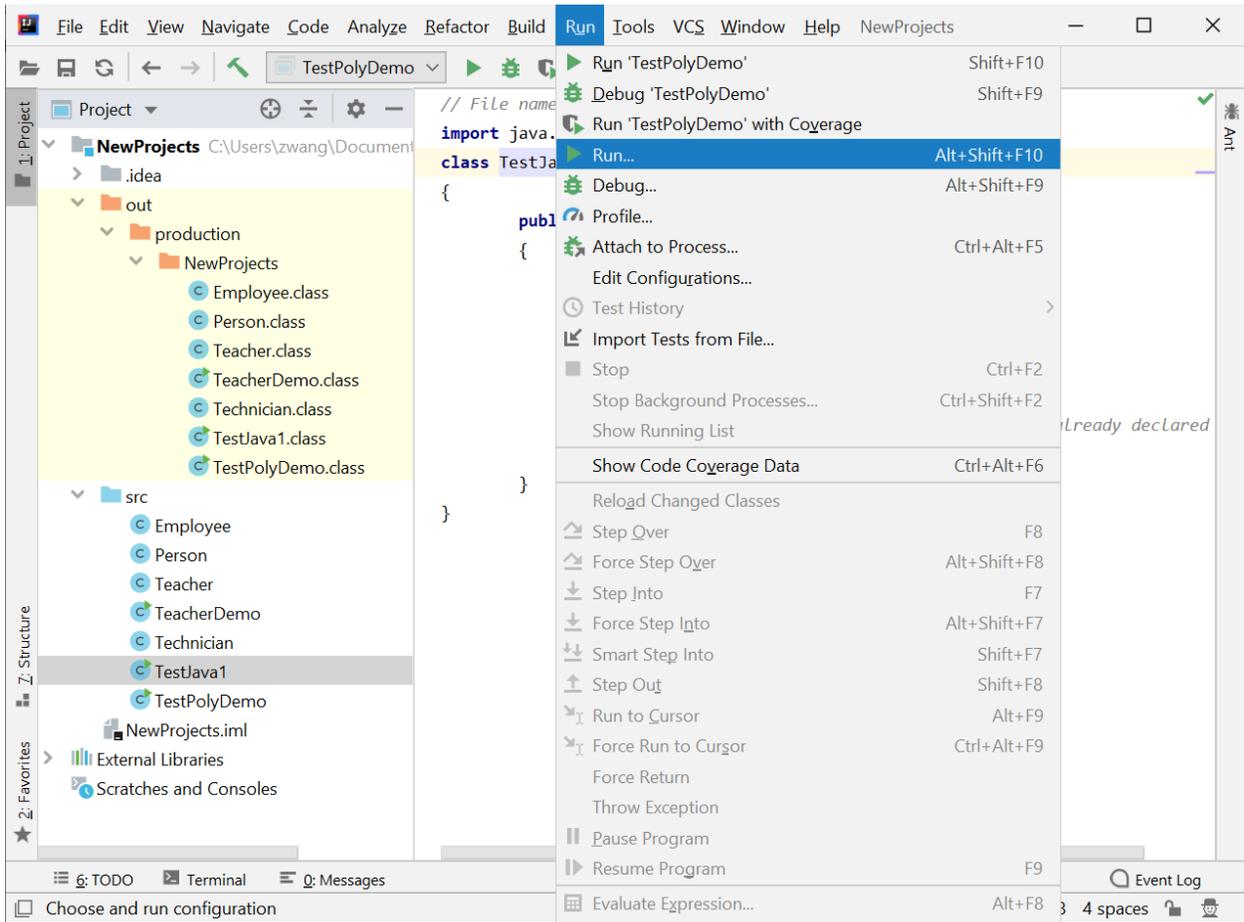

If compilation is successful, it shows in the status bar shown blow

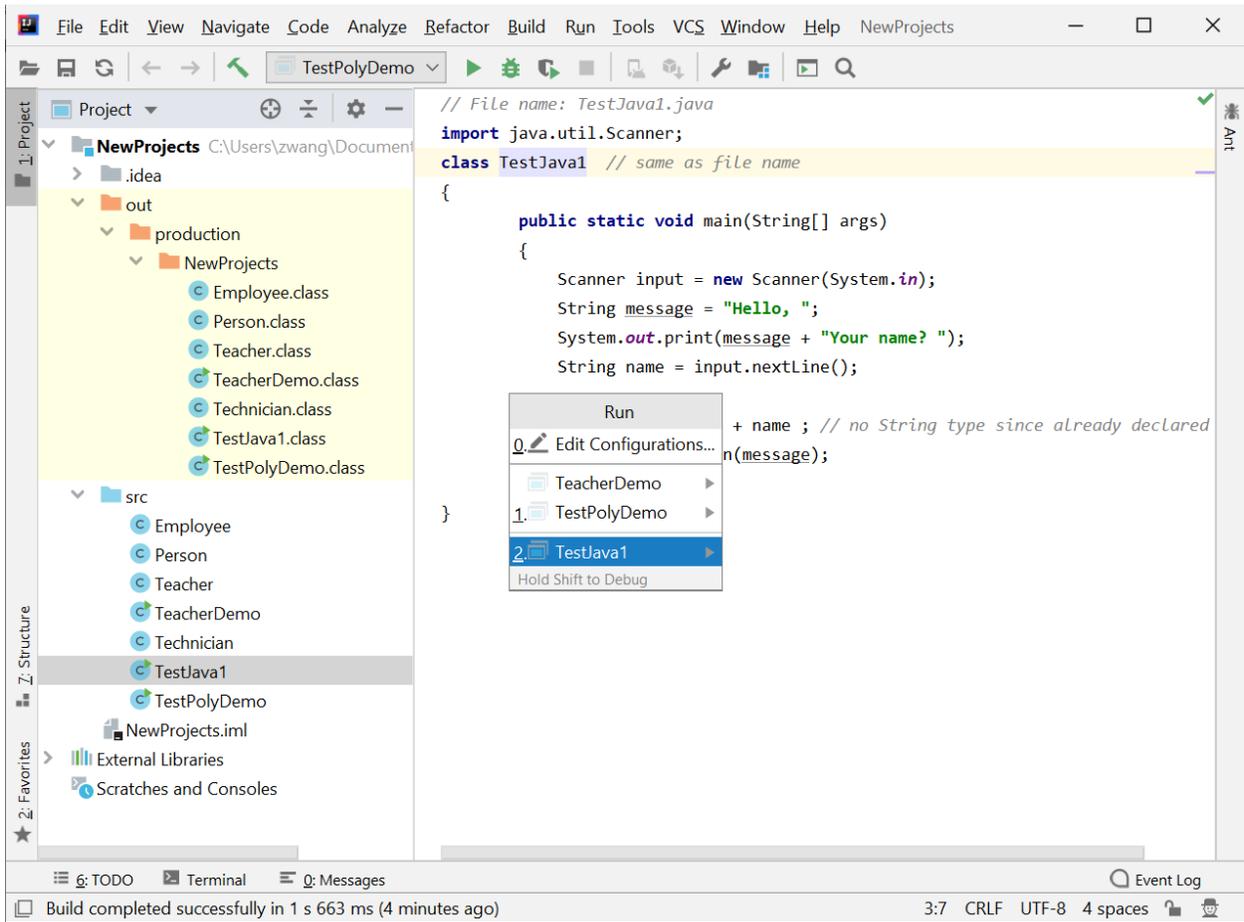

If not successful, the code needs to be modified until it is good

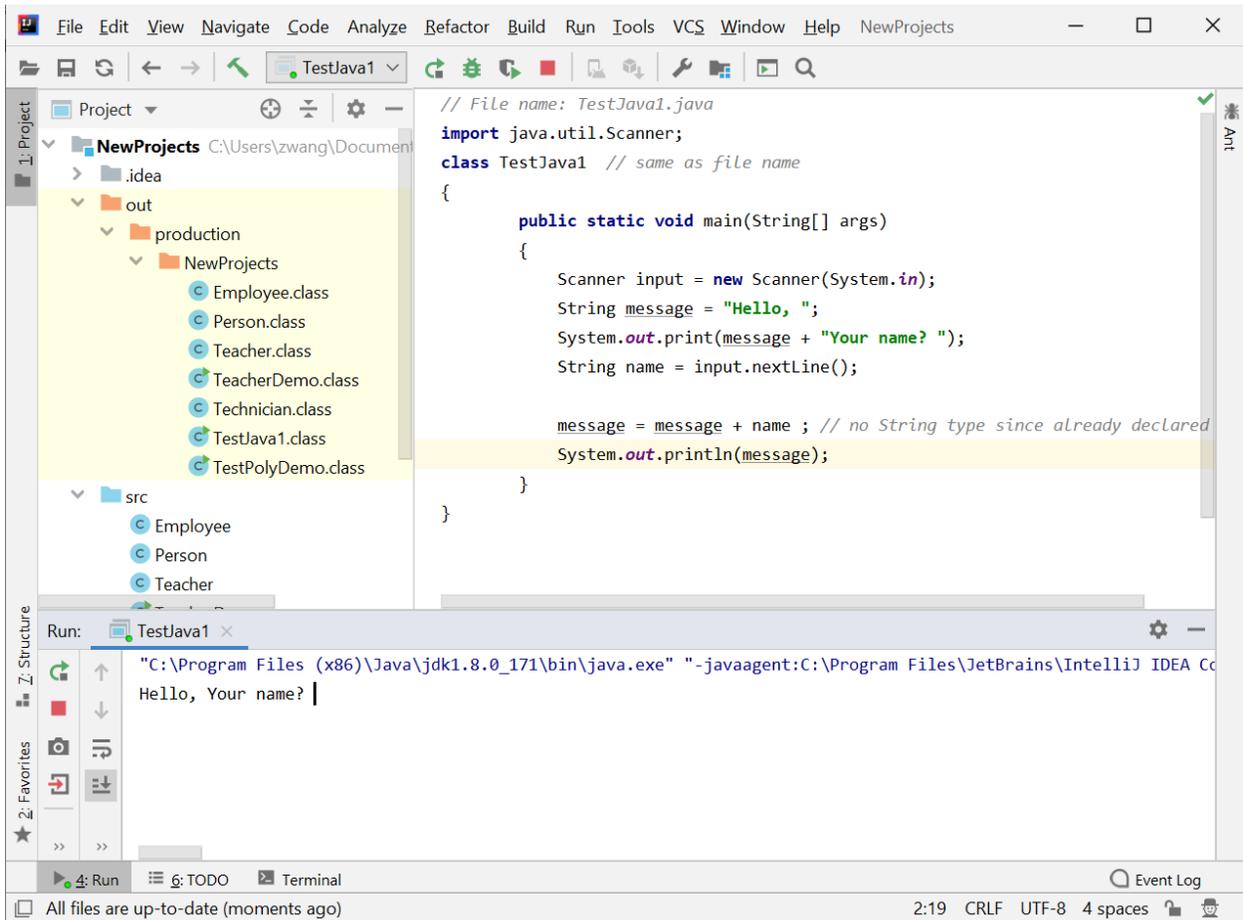

Click Run → Run ...

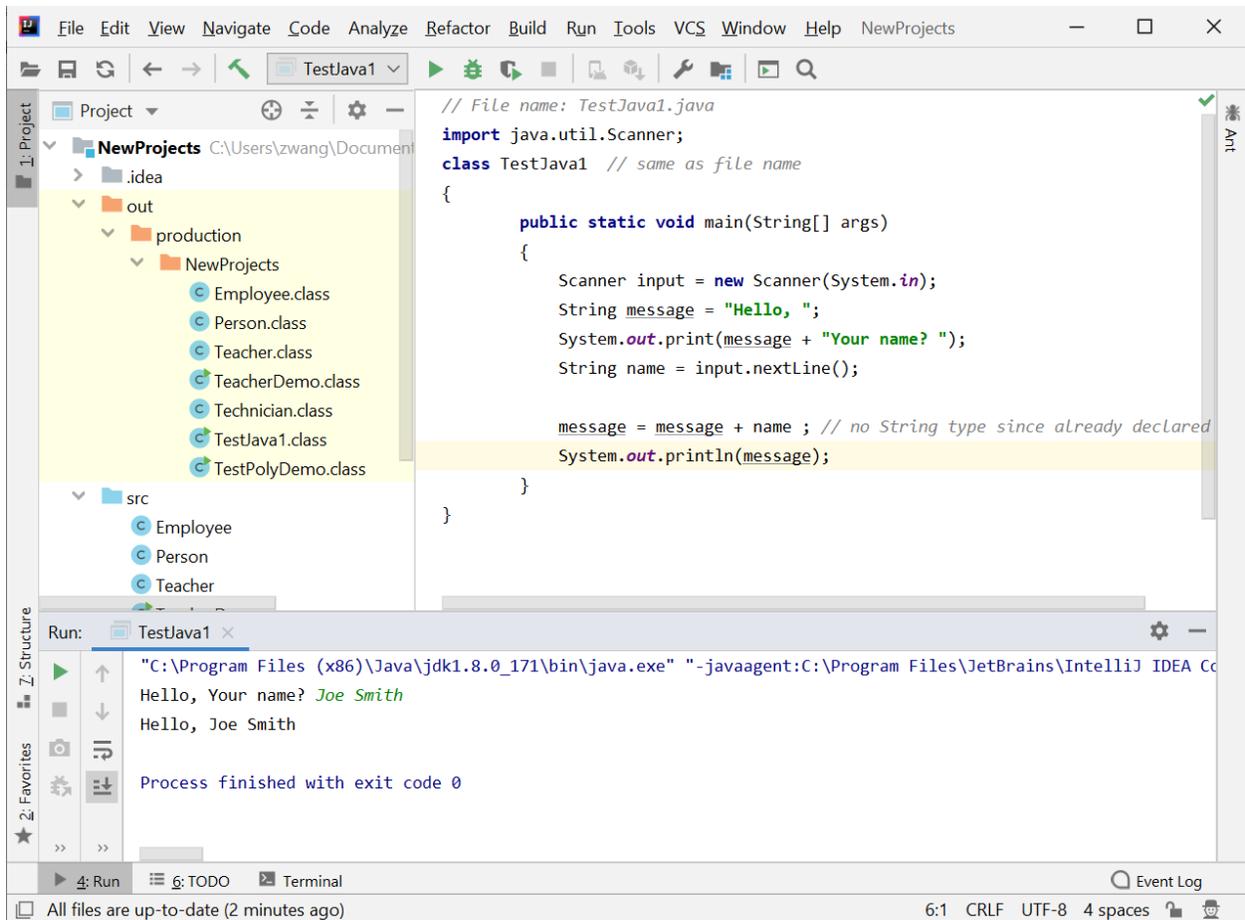

In the "Run" window, there are several classes shown. Click "TestJava1"

If ok, the execution of the code is in process as follows, and perform I/O operations shown below.

You are done. Congratulations!
